

Member & Office Handbook

One application, two entirely separate doors. Part one is for members, on their own phone. Part two is for the party staff who run the register. Read the half that is yours.

What triggers a notification

Every address

START HERE

Which door is yours

Members and staff are different kinds of account, kept separately, and neither can use the other's screens. The address you open decides which sign-in form you get.

MEMBERS

/login

The members' form, and what the installed app opens on. Everything in Part One starts here.

OFFICE STAFF

/admin

The office form. Reached from the **Admin's Portal** button at the bottom of the members' form. Everything in Part Two starts here.

Two further addresses need no account at all: `/badge`, where a member collects their attendance QR code, and `/check-in`, which is the same screen as `/login` and is the address printed on meeting posters.

For members

Your own record, the meetings you attend, and the ways the party reaches you — all from your phone.

Signing in

Go to `/login`. The first field accepts **either an email address or a phone number**. Phone is the reliable one: many records have no email yet, and your starting password is built from the phone number anyway.

Your starting password

Until you change it, your password is the **initial of your last name in capitals** followed by the **last seven digits of your phone number**.

LAST NAME	PHONE ON RECORD	STARTING PASSWORD
Ragoo	5712 3456	R7123456
Bhagwan	+230 5987 6543	B9876543

Seven digits counted from the end, because numbers are written inconsistently across the register — `+230 5712 3456`, `230-57123456` and `57123456` all give the same answer.

IF IT WILL NOT LET YOU IN

Members with no last name recorded, or fewer than seven digits of phone, get *no* starting password and cannot sign in until the office sets one. That is deliberate — a short number must never collapse into a password somebody could guess. Ask your office to complete your record.

Changing it

The portal keeps reminding you while you are still on the starting password, because anyone who knows your name and number can work it out. A new one must be at least eight characters. Changing it **signs out**

every other device — which is the point: if someone had guessed the old password, that ends their session too.

Installing it on your phone

The portal installs to your home screen and then behaves like any other app: its own icon, no browser bars, its own notifications. **On iPhone this is not optional if you want notifications** — Safari only delivers them to an app that has been added to the home screen.

iPhone & iPad

1 Open the portal in

Safari . Chrome on iPhone cannot install it.

2 Tap

Share , then

Add .
to
Home
Screen

3 Open the app from the new icon, not from Safari.

Android

1 Open the portal in Chrome.

2 Accept the

Install prompt, or choose it from the browser menu.
app

WORTH KNOWING

The installed app and the same site in your browser count as two separate installations. Turning notifications on in one does not turn them on in the other.

What is in the portal

My details

Your record, and the parts of it you may correct yourself: name, email, phone, address, date of birth, occupation, whether you are reachable on WhatsApp, how you prefer to be contacted (email, SMS or WhatsApp), and the volunteering you are interested in. Everything else — your office, your membership history — is the register's, and only the office can change it.

My meetings

Meetings at your office, upcoming and past, and which ones you were recorded at. A **Check in** button sits alongside for when you are at one.

Announcements

Notices the office has published, with images. These are the same notices sent by email, kept here so you can find one again.

Forum

Topics and replies shared with everyone at your office and with the office staff. You can start a topic, reply, attach an image, and edit or delete your own posts. Replies to a topic you are part of reach you as notifications.

IF A POST DISAPPEARS

A note in its place saying an administrator removed it means it was moderated, not deleted. The office can put it back.

Incidents

Raise something with the office — a problem in your area, a request, anything needing an answer — and follow it through. Every incident starts as **Open**; the office moves it to **In progress**, **Resolved** or **Closed**. Both sides can comment, and each comment notifies the other.

News

The party's public Facebook posts, pulled in and cached so the page stays quick.

Checking in to a meeting

The meeting's QR code is projected on a wall or printed on a poster, so everyone in the room has it. It only says *which meeting* — what proves *who is arriving* is your sign-in. That is why the order matters:

1 Sign in to the portal first.

2 Tap

Check and scan the meeting's code.
in

3 You are on the attendance list. Scanning twice is harmless — it just says you are already checked in.

Because your identity comes from your sign-in and never from the scan, you can only ever check *yourself* in.

Getting your badge

Your badge is a QR code that identifies *you*, so staff can record you present by scanning it at the door. You can fetch it at </badge> without signing in, by giving your **national ID and date of birth**. Both must match the same record.

WHY IT ASKS FOR TWO PRIVATE FACTS

Whoever holds your badge can be recorded present as you, so it is treated as a credential. A name search would let anyone be counted as anyone — and, worse, let a stranger confirm whether a named person belongs to a political party. Two matching private facts, an identical reply however near a guess came, and a rate limit make that impractical.

Your notifications

The bell in the header carries an unread count and your thirty most recent notices. Tapping one marks it read and takes you to it.

Getting them when the app is closed

Open the bell, choose **Enable phone notifications**, and allow the permission your phone asks for. Notices then arrive as banners whether or not the app is open. **Disable phone notifications** stops them — for that device only.

Clearing the list

Swipe one away Drag a notification to the left and let go. On a computer, hover it and use the × that appears.	Mark all read Clears the unread badge and leaves the notices in the list.
Clear all Deletes every notification. It asks twice, because it cannot be undone.	Automatic tidying Anything you read more than a week ago is removed each Sunday. Unread notices are never touched.

For office staff

The register, the meetings, and everything the party sends out — all scoped to your own office.

Signing in & permissions

Go to `/admin` and sign in with your email address and password, set up for you by an existing administrator. There are two levels:

ROLE	CAN REACH
Administrator	Every office screen: register, meetings, attendance, announcements, forum, incidents and staff accounts.
Staff without the admin role	The dashboard only. Management screens answer with a permission notice rather than a broken page.

Either way, everything you see is **scoped to your own office**. Another office's register is not yours to browse, and that is enforced on every request rather than merely hidden in the interface.

Dashboard

Five figures for your office:

FIGURE	COUNTS
Members	Everyone on your register.
Meetings	Every meeting your office has held.
Attendances	Every attendance recorded across those meetings.
Average participants	Typical turnout — how many people actually show up.
Average attendance	That turnout as a share of your membership.

The register

Search and filter the membership, open a member for their full record, and edit anything on it. The list shows each member's attendance as a percentage of the meetings your office has held.

- **Documents.** A CV (PDF, Word or image) and supporting documents (PDF or image) can be attached to a member. Neither is ever served from a public URL — both are streamed back only to staff who may view that member.
- **Badges.** Print a sheet of attendance QR badges to hand out at a meeting.
- **Export.** Download the whole register as an Excel file, named for the day it was taken.
- **Deleting.** Removing a member hides the record rather than destroying it, and it can be undone.

Meetings & attendance

Create a meeting with a date, start and end time, a topic and an attachment. Each one gets its own check-in QR code to project or print.

Recording attendance at the door

- 1 Open the meeting and go to its attendance screen.
- 2 Scan each member's badge, or search and tick them off by name.
- 3 Someone not yet on the register can be added on the spot and recorded in the same action.

Members can also check themselves in from their own phones, using the meeting's code — see Part One. Both routes write to the same list.

VISITORS FROM OTHER OFFICES

A meeting's participants list shows everyone recorded present, including members of other offices. They were in the room, so they belong to *this meeting's* record even though they are not on your register — and the count and the list have to agree.

Announcements

Write a notice with a title, body and image, then email it to members you pick from the register. It also appears in the members' portal.

Sending hands the work to a background worker, so the screen returns straight away and then fills in as the emails go out. Each recipient shows one of three states:

STATE	MEANING
Queued	Waiting for the worker, or going out right now.
Sent	Accepted by the mail server, with the date.
Failed	The mail server's own explanation — usually a wrong or dead address.

Sending again **only retries the failures**. Members already sent to cannot be re-selected, so nobody receives the same notice twice. Correcting a bad address and re-sending is the intended way to clear a bounce.

Forum moderation

You see the same forum members do, and can post in it as the party. What you also have is moderation.

MODERATION HIDES, IT DOES NOT DELETE

Moderating a topic or a reply removes it from the members' view and leaves a note in its place saying an administrator took it down. You can still read the original, and **unmoderate** puts it back. Nothing here erases anyone's words — a decision that cannot be reviewed afterwards is not a decision.

Incidents

Everything members have raised at your office, in one list. Open one to read it, reply, and move it along. The member is notified of each of your comments, and you are notified of each of theirs.

STATUS	SET BY	MEANS
Open	Automatic on creation	Raised, not yet picked up.
In progress	Staff	Someone is dealing with it.
Resolved	Staff	Dealt with; the member can still reply.
Closed	Staff	Finished.

A member can only ever create an incident as **Open**, whatever their request says — the status is the office's judgement, not the reporter's.

Staff accounts

Administrators create and edit the office's staff accounts and decide which of them carry the admin role. Deleting a staff account hides it and can be undone.

Both sides

Things that hold everywhere, and a map of the whole application.

Rules the system enforces

Members and staff are separate accounts

A member's sign-in is rejected by every office screen, and a staff sign-in by the member portal. This is checked on the server for each request, not merely hidden in the interface.

Everything belongs to an office

Members, meetings, announcements, forum topics and incidents are all scoped to one office. The single deliberate exception is a meeting's participants list, which includes visitors from elsewhere.

Deleting hides, and can be undone

Members, meetings, announcements, incidents and staff accounts are all recoverable after deletion. Notifications are the exception: clearing those really does remove them.

Nothing is sent or counted twice

Checking in to the same meeting twice, or re-sending an announcement, both do the safe thing rather than duplicating.

What triggers a notification

WHEN	WHO HEARS ABOUT IT
A member is added, or a member's record is edited	Staff at that office
A member starts a forum topic	Staff, and every member at that office
Someone replies in the forum	Staff, and everyone taking part in that topic
A member raises an incident	Staff at that office
Staff comment on an incident	The member who raised it
A member comments on an incident	Staff at that office
An announcement is published	Every member at that office

Every address

ADDRESS	WHO	WHAT
/login	Member	Members' sign-in; what the installed app opens on
/check-in	Member	The same screen; the address printed on meeting posters
/my	Member	Details, meetings, announcements, forum, incidents, news
/badge	Public	Collect your QR badge with national ID + date of birth
/admin	Staff	Office sign-in
/	Staff	Dashboard
/members	Admin	The register, documents, badges, export
/meetings	Admin	Meetings, attendance, participants
/announcements	Admin	Write and send notices
/forum	Admin	The forum, with moderation
/incidents	Admin	What members have raised
/users	Admin	Staff accounts

Getting help

Anything about a member's own record — a wrong phone number, a missing email, a password that will not work — is the office's to fix, not something the app can resolve on its own.
